| Background:         | Synonyms: ARP3, Actin-related protein 3, Actin-like protein 3, ACTR3  Background: Functions as ATP-binding component of the Arp2/3 complex which is involved in regulation of actin polymerization and together with an activating nucleation-promoting factor |
|                     | (NPF) mediates the formation of branched actin networks. Seems to contact the pointed end of the daughter actin filament. Plays a role in ciliogenesis.  |
