| Quantity:            | 100 μL  |  |
|----------------------|---|--|
| Target:              | DCAKD   |  |
| Binding Specificity: | AA 61-160   |  |
| Reactivity:          | Human   |  |
| Host:                | Rabbit  |  |
| Clonality:           | Polyclonal  |  |
| Conjugate:           | This DCAKD antibody is conjugated to Biotin   |  |
| Application:         | ELISA, Western Blotting (WB), Immunohistochemistry (Paraffin-embedded Sections) (IHC (p)), Immunohistochemistry (Frozen Sections) (IHC (fro)) |  |

#### **Product Details**

| Immunogen:            | KLH conjugated synthetic peptide derived from human DCAKD |
|-----------------------|---|
| Isotype:              | IgG   |
| Cross-Reactivity:     | Human   |
| Predicted Reactivity: | Mouse,Rat,Dog   |
| Purification:         | Purified by Protein A.                                    |

#### **Target Details**

| Target:           | DCAKD                  |
|-------------------|------------------------|
| Alternative Name: | DCAKD (DCAKD Products) |

### **Target Details**

| ranget Betane       |  |
|---------------------|--|
| Background:         | Synonyms: Dephospho CoA kinase domain containing protein, Dephospho CoA kinase domain                              |
|                     | containing, isoform CRA_b, DCAKD_HUMAN.  |
|                     | Background: DCAKD belongs to the coaE family. It contains one DPCK (dephospho CoA kinase)                          |
|                     | domain. There are two isoforms. Coenzyme A (CoA) is an essential cofactor used in numerous                         |
|                     | biochemical pathways. It plays a critical role in the synthesis and oxidation of fatty acids and is                |
|                     | vital to the citric acid cycle. The biosynthesis pathway of CoA from pantothenic acid (also                        |
|                     | known as vitamin B5) is essential and universal in prokaryotes and eukaryotes. In humans, the                      |
|                     | final steps of the biosynthesis pathway are carried out by the bifunctional enzyme COASY. The                      |
|                     | sequence of these enzymes are highly conserved between different bacterial species. The                            |
|                     | phosphopantetheine adenylyltransferase and decoenzyme A kinase activities of COASY are                             |
|                     | evolutionarily conserved activities. DCAKD (deCoA kinase domain containing protein) is a 231                       |
|                     | amino acid protein that consists of a deCoA kinase domain and an ATP nucleotide binding                            |
|                     | motif. Localizing to mitochondria and the cytosol, DCAKD belongs to the coaE family which                          |
|                     | suggests that it may play a role in the biosynthesis of CoA.   |
| Gene ID:            | 79877  |
| Pathways:           | SARS-CoV-2 Protein Interactome   |
| Application Details |  |
| Application Notes:  | WB 1:300-5000  |
|                     | IHC-P 1:200-400  |
|                     | IHC-F 1:100-500  |
| Restrictions:       | For Research Use only  |
| Handling            |  |
| Format:             | Liquid   |
| Concentration:      | 1 μg/μL  |
| Buffer:             | Aqueous buffered solution containing 0.01M TBS (pH 7.4) with 1 % BSA, 0.03 % Proclin300 and 50 % Glycerol.         |
| Preservative:       | ProClin  |
| Precaution of Use:  | This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only. |
|                     |  |
