Alternative Name:	Dihydropyrimidinase (DPYS Products)
Background:	Synonyms: DHP, DHPase, Dihydropyrimidinase, Dihydropyrimidine amidohydrolase, Dpys,

Target Details

DPYS_HUMAN, Hydantoinase.

Background: Catalyzes the second step of the reductive pyrimidine degradation, the reversible hydrolytic ring opening of dihydropyrimidines. Can catalyzes the ring opening of 5,6-dihydrouracil to N-carbamyl-alanine and of 5,6-dihydrothymine to N-carbamyl-amino isobutyrate. Tissue specificity: Liver and kidney. Involvement in disease: Defects in DPYS are the cause of dihydropyrimidinase deficiency (DHPD). DHPD is an autosomal recessive disorder characterized by dihydropyrimidinuria and associated with a variable clinical phenotype: epileptic or convulsive attacks, dysmorphic features and severe developmental delay, and congenital microvillous atrophy.
