Target Details	
Background:	Synonyms: mitochondrial, NIMP, NOGO interacting mitochondrial protein, NOGO-interacting
	mitochondrial protein, Reticulon 4 interacting protein 1, Reticulon 4 interacting protein 1,
	mitochondrial, Reticulon-4-interacting protein 1, RT4I1_HUMAN, Rtn4ip1, NIMP/RTN4IP1.
	Background: Appears to be a potent inhibitor of regeneration following spinal cord injury.Nogo
	is an oligodendrocyte-specific member of the Reticulon family and is a component of CNS
	white matter that inhibits axon outgrowth, induces collapse of growth cones of chick dorsal
	root ganglion cells, and inhibits the spreading of 3T3 fibroblasts. Nogo is expressed by
	oligodendrocytes but not by Schwann cells, and associates primarily with the endoplasmic
	reticulum. Nogo exists in three different splice forms, Nogo-A, -B and -C. NIMP (NOGO-
	interacting mitochondrial protein), also known as RTN4IP1 (Reticulon-4-interacting protein 1), is
	a 396 amino acid mitochondrial protein that contains a C-terminal oxidoreductaselike domain
	and numerous sites for phosphorylation. NIMP is expressed in mitochondrial-rich tissue such
	as kidney, heart, skeletal muscle and specific regions within the nervous system. Through
	interaction with Nogo, it is likely that NIMP plays a role in Nogo-induced inhibition of neurite
	growth. There are three isoforms of NIMP that are produced as a result of alternative splicing
	events.
