| | domain 23, WD repeat-containing protein 23, WDR23. |
| | Background: WD-repeats are motifs that are found in a variety of proteins and are characterized |
| | by a conserved core of 40-60 amino acids that commonly form a tertiary propeller structure. |
| | While proteins that contain WD-repeats participate in a wide range of cellular functions, they are |
| | generally involved in regulatory mechanisms concerning chromatin assembly, cell cycle control, |
| | signal transduction, RNA processing, apoptosis and vesicular trafficking. WDR23 (WD-repeat- |
| | containing protein 23), also known as GL014 or PRO2389, is a 546 amino acid protein that |
| | contains seven WD-repeats. WDR23 is expressed as three isoforms due to alternative splicing |
| | events. |
