**Background:** Synonyms: E3 ubiquitin-protein ligase RBX1, MGC13357, MGC1481, Protein ZYP, Rbx 1, Rbx1, RBX1\_HUMAN, Regulator of Cullins 1, Ring box 1, RING box protein 1, RING finger protein 75, RING finger protein, RING-box protein 1, Ringbox protein 1, RNF 75, RNF75, ROC 1, ZYP protein. Background: E3 ubiquitin ligase component of multiple cullin-RING-based E3 ubiquitin-protein ligase complexes which mediate the ubiquitination and subsequent proteasomal degradation of target proteins, including proteins involved in cell cycle progression, signal transduction, transcription and transcription-coupled nucleotide excision repair. The functional specificity of the E3 ubiquitin-protein ligase complexes depends on the variable substrate recognition components. As a component of the CSA complex promotes the ubiquitination of ERCC6 resulting in proteasomal degradation. Through the RING-type zinc finger, seems to recruit the E2 ubiquitination enzyme, like CDC34, to the complex and brings it into close proximity to the substrate. Probably also stimulates CDC34 autoubiquitination. May be required for histone H3 and histone H4 ubiquitination in response to ultraviolet and for subsequent DNA repair. Promotes the neddylation of CUL1, CUL2, CUL4 and CUL4 via its interaction with UBE2M.
