| Background: | Synonyms: F box protein 15, F-box only protein 15, F-box protein 15, Fbxo15, MGC39671, FBX15_HUMAN. |
| | Background: FBX015, also known as FBX15, is a 434 amino acid protein that contains one C- |
| | terminal F-box domain and belongs to the F-box family of proteins. F-box proteins are critical |
| | components of the SCF (Skp1-CUL-1-F-box protein) type E3 ubiquitin ligase complex and are |
| | involved in substrate recognition and recruitment for ubiquitination. They are members of a |
| | larger family of proteins that are involved in the regulation of a wide variety of cellular |
| | processes (including the cell cycle, immune response, signaling cascades and developmental |
| | processes) through the targeting of proteins, such as cyclins, cyclin-dependent kinase |
| | inhibitors, IkB-a and b-catenin, for degradation by the proteasome after ubiquitination. Via its F- |
| | box domain, FBX015 can directly interact with Skp1 p19 and CUL-1. In addition, FBX015 is a |
| | target of the transcription factor Oct-3/4, however, it does not appear to be essential for early |
| | development and fertility. |
