Target Details		
Background:	Synonyms: BTB/POZ domain-containing protein 17, btbd17, BTBDH_HUMAN, Galectin-3-	
	binding protein-like.	
	Background: The BTB (broad-complex, Tramtrack and Bric a brac) domain, also known as the	
	POZ (Poxvirus and zinc finger) domain, is an N-terminal homodimerization domain that	
	contains multiple copies of kelch repeats and/or C2H2-type zinc fingers. Proteins that contain	
	BTB domains are thought to be involved in transcriptional regulation via control of chromatin	
	structure and function. BTBD17 (BTB/POZ domain-containing protein 17), also known as	
	BTBD17A, galectin-3-binding protein-like or LGALS3BPL, is a 478 amino acid protein that	
	contains one BTB (POZ) domain and a BACK (BTB/Kelch associated) domain. The gene	
	encoding BTBD17 maps to human chromosome 17, which comprises over 2.5 % of the human	
	genome and encodes over 1,200 genes. Two key tumor suppressor genes are associated with	
	chromosome 17, namely, p53 and BRCA1. Malfunction or loss of p53 expression is associated	
	with malignant cell growth and Li-Fraumeni syndrome.	
Gene ID:	388419	
UniProt:	A6NE02
