	Background: FKSG14, also known as CENPK (centromere protein K) is a component of the
	CENPA-CAD (nucleosome distal) complex. It may be involved in incorporation of CENPA into
	centromeres and is required for proper kinetochore function, mitotic progression and
	chromosome segregation. May be involved in incorporation of newly synthesized CENPA into
	centromeres via its interaction with the CENPA-NAC complex. Acts in coordination with
	CASC5/KNL1 to recruit the NDC80 complex to the outer kinetochore. FKSG14 constitutively
	localized to centromeres throughout the cell cycle. There are 3 isoforms produced by
	alternative splicing.
