	repair protein 1, MRP 1, MRP1, MSH 3, MSH-3, MSH3_HUMAN, MutS homolog 3.
	Background: Component of the post-replicative DNA mismatch repair system (MMR).
	Heterodimerizes with MSH2 to form MutS beta which binds to DNA mismatches thereby
	initiating DNA repair. When bound, the MutS beta heterodimer bends the DNA helix and shields
	approximately 20 base pairs. MutS beta recognizes large insertion-deletion loops (IDL) up to 13
	nucleotides long. After mismatch binding, forms a ternary complex with the MutL alpha
	heterodimer, which is thought to be responsible for directing the downstream MMR events,
	including strand discrimination, excision, and resynthesis.
Gene ID:	4437
