|---|
| Background: Negative regulator of MYD88- and TRIF-dependent toll-like receptor signaling |
| pathway which plays a pivotal role in activating axonal degeneration following injury. Promotes |
| Wallerian degeneration an injury-induced axonal death pathway which involves degeneration of |
| an axon distal to the injury site. Can activate neuronal death in response to stress. Regulates |
| dendritic arborization through the MAPK4-JNK pathway. Involved in innate immune response. |
| Inhibits both TICAM1/TRIF- and MYD88-dependent activation of JUN/AP-1, TRIF-dependent |
| activation of NF-kappa-B and IRF3, and the phosphorylation of MAPK14/p38. |
