	proteins that participate in calcium-binding events within the cell. EF-hand domains generally	
	exist in a pair that, together, form a stable four-helix bundle that enables the binding of calcium	
	ions. Swiprosin-2, also known as EFHD1 (EF-hand domain-containing protein D1), SWS2,	
	PP3051 or MST133, is a 239 amino acid protein that contains two EF-hand domains and is	
	expressed in a wide variety of tissues, including brain, liver, heart, kidney, testis, ovaries and	
	spleen. Expression of Swiprosin-2, a possible calcium-binding protein, is upregulated during	
	neuronal differentiation, suggesting a role for Swiprosin-2 in brain development and maturation.
