| | 1,200 genes within 170 million base pairs of sequence. Deletion of a portion of the q arm of |

| | chromosome 6 is associated with early onset intestinal cancer, suggesting the presence of a |
| | cancer susceptibility locus. Porphyria cutanea tarda is associated with chromosome 6 through |
| | the HFE gene which, when mutated, predisposes an individual to developing this porphyria. |
| | Notably, the PARK2 gene, which is associated with Parkinson's disease, and the genes |
| | encoding the major histocompatiblity complex proteins, which are key molecular components |
| | of the immune system and determine predisposition to rheumatic diseases, are also located on |
| | chromosome 6. Stickler syndrome, 21-hydroxylase deficiency and maple syrup urine disease |
| | are also associated with genes on chromosome 6. A bipolar disorder susceptibility locus has |
| | been identified on the q arm of chromosome 6. |
