	amino acid protein that belongs to the sulfatase family of bone and cartilage matrix proteins.
	Localized to the plasma membrane, Arylsulfatase H uses calcium as a cofactor to hydrolyze
	sulfate esters. The gene encoding Arylsulfatase D maps to human chromosome X, which
	contains nearly 153 million base pairs and houses over 1,000 genes. In conjunction with
	chromosome Y, chromosome X is responsible for sex determination. There are a number of
	conditions related to an abnormal number and combination of sex chromosomes, some of
	which include Turner's syndrome, color blindness, hemophilia and Duchenne muscular
	dystrophy.
