	protein,Vpr-interacting protein.
	Background: Component of the COP9 signalosome complex (CSN), a complex involved in
	various cellular and developmental processes. The CSN complex is an essential regulator of the
	ubiquitin (Ubl) conjugation pathway by mediating the deneddylation of the cullin subunits of
	SCF-type E3 ligase complexes, leading to decrease the Ubl ligase activity of SCF-type
	complexes such as SCF, CSA or DDB2. The complex is also involved in phosphorylation of
	p53/TP53, c-jun/JUN, IkappaBalpha/NFKBIA, ITPK1 and IRF8, possibly via its association with
	CK2 and PKD kinases. CSN-dependent phosphorylation of TP53 and JUN promotes and
	protects degradation by the Ubl system, respectively. Has some glucocorticoid receptor-
	responsive activity.
