	Probable E3 ubiquitin protein ligase MARCH10, Probable E3 ubiquitin-protein ligase MARCH10,
	Ring finger protein 190, RNF 190, RNF190.
	Background: The RING-type zinc finger motif is present in a number of viral and eukaryotic
	proteins and is made of a conserved cysteine-rich domain that is able to bind two zinc atoms.
	Proteins that contain this conserved domain are generally involved in the ubiquitination
	pathway of protein degradation. MARCH10 (membrane-associated ring finger (C3HC4) 10),
	also known as RNF190 (ring finger protein 190) or MARCH-X, is an 808 amino acid protein with
	one RING-CH-type zinc finger domain. MARCH10 may function as an E3 ubiquitin-protein ligase
	that accepts a ubiquitin residue from an E2 ubiquitin-conjugating enzyme and immediately
	transfers that residue to a protein that is targeted for degradation.
