	proteins and is made of a conserved cysteine-rich domain that is able to bind two zinc atoms.
	Proteins that contain this conserved domain are generally involved in the ubiquitination
	pathway of protein degradation. RNF130 (ring finger protein 130), also known as GP, G1RZFP
	(G1-related zinc finger protein) or GOLIATH, is a 419 amino acid single-pass type I membrane
	protein that shares similarity with a Drosophila zinc-finger protein found in mesoderm known as
	g1. RNF130 contains one PA (protease associated) domain and a single RING-type zinc finger.
	Implicated in the regulation of growth factor withdrawal-induced apoptosis of myeloid
	precursor cells, RNF130 is encoded by a gene located on human chromosome 5q35.3 and
	mouse chromosome 11 B1.3.
