	gene name, Usp9x, USP9X_HUMAN
	Background: This gene is a member of the peptidase C19 family and encodes a protein that is
	similar to ubiquitin-specific proteases. Though this gene is located on the X chromosome, it
	escapes X-inactivation. Mutations in this gene have been associated with Turner syndrome.
	Alternate transcriptional splice variants, encoding different isoforms, have been characterized.
