	homeobox protein 1, HOPX
	Background: Atypical homeodomain protein which does not bind DNA and is required to
	modulate cardiac growth and development. Acts via its interaction with SRF, thereby
	modulating the expression of SRF-dependent cardiac-specific genes and cardiac development.
	Prevents SRF-dependent transcription either by inhibiting SRF binding to DNA or by recruiting
	histone deacetylase (HDAC) proteins that prevent transcription by SRF. Overexpression causes
	cardiac hypertrophy (By similarity). May act as a tumor suppressor.
Gene ID:	84525
UniProt:	Q9BPY8
Pathways:	Regulation of Muscle Cell Differentiation
