	framework for the formation of these protein-protein interactions. LRRs are present in a variety
	of proteins with diverse structure and function, including innate immunity and nervous system
	development. Several human diseases are associated with mutation in the genes encoding
	LRR-containing proteins. The leucine-rich repeat-containing protein 3B (LRRC3B), also
	designated LRP15, is a 259 amino acid protein that contains 3 LRR repeats. The gene encoding LRRC3B is a tumor suppressor gene that is regulated by DNA methylation. Decreased expression of LRRC3B has been shown in colorectal cancer and gastric cancer, making LRRC3B a candidate marker for those cancers.
