## Target Details

Background: Orai2 is a 254 amino acid multi-pass membrane protein that belongs to the orai family of proteins. Localizing to the plasma membrane, Orai2 plays an important role in store-operated calcium (SOC) entry, a process involving Ca<sup>2+</sup> influx and replenishment of Ca<sup>2+</sup> stores formerly emptied through the action of inositol 1,4,5-trisphosphate production and other Ca<sup>2+</sup> mobilizing agents. CRAC channels are responsible for mediating calcium influx in T-cells and play an important role in the immune response. Orai2 specifically increases the Ca<sup>2+</sup>-selective current through coaction with the Ca<sup>2+</sup> sensor Stim1.
