	Background: Component of the LUBAC complex which conjugates linear polyubiquitin chains in
	a head-to-tail manner to substrates and plays a key role in NF-kappa-B activation and regulation
	of inflammation. LUBAC conjugates linear polyubiquitin to IKBKG and RIPK1 and is involved in
	activation of the canonical NF-kappa-B and the JNK signaling pathways. Linear ubiquitination
	mediated by the LUBAC complex interferes with TNF-induced cell death and thereby prevents
	inflammation. LUBAC is proposed to be recruited to the TNF-R1 signaling complex (TNF-RSC)
	following polyubiquitination of TNF-RSC components by BIRC2 and/or BIRC3 and to conjugate
	linear polyubiquitin to IKBKG and possibly other components contributing to the stability of the
	complex. Together with FAM105B/otulin, the LUBAC complex regulates the canonical Wnt
	signaling during angiogenesis.
