| | Background: Functions as a negative regulator of TGF-beta signaling and thereby probably |
|---------------------|--|
| | plays a role in cell proliferation, differentiation, apoptosis, motility, extracellular matrix |
| | production and immunosuppression. In the canonical TGF-beta pathway, ZFYVE9/SARA |
| | recruits the intracellular signal transducer and transcriptional modulators SMAD2 and SMAD3 |
| | to the TGF-beta receptor. Phosphorylated by the receptor, SMAD2 and SMAD3 then form a |
| | heteromeric complex with SMAD4 that translocates to the nucleus to regulate transcription. |
| | Through interaction with SMAD2 and SMAD3, LDLRAD4 may compete with ZFYVE9 and |
| | SMAD4 and prevent propagation of the intracellular signal. |
