Target Details

	Spermatogenesis is accompanied by expression of a varied repertoire of PDE4 enzymes at
	different stages of cell differentiation that presumably perform specialized functions. Confocal
	microscopic examination revealed the presence of PDE4A8 in primary and secondary
	spermatids but not in mature spermatozoa. PDE4A8 inhibition results in increased apoptosis of
	the germ cells accompanied with reduction in the number of mature spermatozoa.
Gene ID:	5141
