Target Details

	Background: Essential bifunctional enzyme that catalyzes both the N-deacetylation and the N-
	sulfation of glucosamine (GlcNAc) of the glycosaminoglycan in heparan sulfate. Modifies the
	GlcNAc-GlcA dissacharide repeating sugar backbone to make N-sulfated heparosan, a
	prerequisite substrate for later modifications in heparin biosynthesis. Plays a role in
	determining the extent and pattern of sulfation of heparan sulfate. Compared to other NDST
	enzymes, its presence is absolutely required. Participates in biosynthesis of heparan sulfate
	that can ultimately serve as L-selectin ligands, thereby playing a role in inflammatory response.
Gene ID:	3340
Pathways:	Regulation of Systemic Arterial Blood Pressure by Hormones, Glycosaminoglycan Metabolic
	Process
Application Details	
Application Notes:	IF(IHC-P) 1:50-200
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 μg/μL
Buffer:	Aqueous buffered solution containing 0.01M TBS (pH 7.4) with 1 % BSA, 0.03 % Proclin300 and
	50 % Glycerol.
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be
	handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles.
Expiry Date:	12 months
