| | 12 including hypochondrogenesis, achondrogenesis and Kniest dysplasia. Noonan syndrome, |
|---------------------|--|
| | which includes heart and facial developmental defects among the primary symptoms, is |
| | caused by a mutant form of PTPN11 gene product, SH-PTP2. Chromosome 12 is also home to |
| | a homeobox gene cluster which encodes crucial transcription factors for morphogenesis, and |
| | the natural killer complex gene cluster encoding C-type lectin proteins which mediate the NK |
| | cell response to MHC I interaction. Trisomy 12p leads to facial development defects, seizure |
| | disorders and a host of other symptoms varying in severity depending on the extent of |
| | mosaicism and is most severe in cases of complete trisomy. The C12orf53 gene product has |
| | been provisionally designated C12orf53 pending further characterization. |
