MAP1B (MAP1B Products)

## Target Details

Background:	Synonyms: MAP5, FUTSCH, PPP1R102, Microtubule-associated protein 1B, MAP-1B, MAP1B Background: Facilitates tyrosination of alpha-tubulin in neuronal microtubules (By similarity). Phosphorylated MAP1B may play a role in the cytoskeletal changes that accompany neurite
	extension. Possibly MAP1B binds to at least two tubulin subunits in the polymer, and this
	bridging of subunits might be involved in nucleating microtubule polymerization and in
	stabilizing microtubules. Acts as a positive cofactor in DAPK1-mediated autophagic vesicle
	formation and membrane blebbing.
