Target Details

Background:	Synonyms: Double stranded RNA binding protein Staufen homolog 2, MGC119606, STAU 2, STAU2, STAU-2, Staufen Drosophila, RNA-binding protein homolog 2, Staufen homolog 2, Staufen RNA binding protein homolog 2, Staufen, RNA binding protein, homolog 2 Drosophila, 39K2, 39K3, DKFZp781K0371, STAU2_HUMAN. Background: Staufen homolog 2 is a member of the family of double-stranded RNA (dsRNA)-binding proteins involved in the transport and/or localization of mRNAs to different subcellular compartments and/or organelles. These proteins are characterized by the presence of multiple dsRNA-binding domains which are required to bind RNAs having double-stranded secondary structures. Staufen homolog 2 shares 48.5 % and 59.9 % similarity with drosophila and human staufen, respectively. The exact function of Staufen homolog 2 is not known, but since it contains 3 copies of conserved dsRNA binding domain, it could be involved in double-stranded RNA binding events. Several transcript variants encoding different isoforms have been found for this gene.
