## Target Details

Target:	Kyphoscoliosis Peptidase (KY)
Alternative Name:	KY/Kyphoscoliosis peptidase ( <a href="#">KY Products</a> )
Background:	Synonyms: KY, KY_HUMAN, Kyphoscoliosis peptidase.

Target Details

	Background: KY peptidase (Kyphoscoliosis peptidase) is a 561 amino acid cytoskeleton protease that interacts with several sarcomeric cytoskeletal proteins, including Filamin 2. KY peptidase probably plays a role in the maturation, function and stabilization of the neuromuscular junction. KY-null mouse mutants exhibit distinct irregular subceullular Filamin 2 localization, suggesting that KY peptidase deficiency may be the cause of several types of limb-girdle muscular dystrophies.
