Target Details

Background:	Synonyms: EXOC 3, EXOC3, Exocyst complex component 3, Exocyst complex component Sec 6, Exocyst complex component Sec6, rSec 6, Sec 6, Sec-6, Sec 6 homolog, Sec 6p, Sec6, SEC6 L1, SEC6 like 1, Sec6 protein, SEC6L1, Sec6p, EXOC3_HUMAN. Background: The protein encoded by this gene is a component of the exocyst complex, a multiple protein complex essential for targeting exocytic vesicles to specific docking sites on the plasma membrane. Though best characterized in yeast, the component proteins and functions of exocyst complex have been demonstrated to be highly conserved in higher eukaryotes. At least eight components of the exocyst complex, including this protein, are found to interact with the actin cytoskeletal remodeling and vesicle transport machinery. The complex is also essential for the biogenesis of epithelial cell surface polarity.
