	Background: DISP2 is the second of three known homologs of the D.melanogaster protein
	Dispatched. It is a multitransmembrane protein containing two PTCH/DISP domains and is
	thought to be involved in the release of lipid-anchored Hedgehog from producing cells.
	Hedgehog is a major player in signaling pathways during embryogenesis, tissue regeneration,
	and carcinogenesis and the DISP proteins have been implicated in these pathways. Recently, it
	has been shown that DISP2 is translationally regulated by the microRNA miR-214 in zebrafish.
	Expression of this miRNA decreased DISP2 promoter activity in vitro and its overexpression in
	zebrafish resulted in a phenotype identical to that observed by DISP2 mutants. At least two
	isoforms of DISP2 are known to exist.
