	MinK-related peptide 2, Minimum potassium ion channel-related peptide 2, Potassium channel subunit beta MiRP2, KCNE3
	Background: Ancillary protein that assembles as a beta subunit with a voltage-gated potassium
	channel complex of pore-forming alpha subunits. Modulates the gating kinetics and enhances
	stability of the channel complex. Assembled with KCNB1 modulates the gating characteristics
	of the delayed rectifier voltage-dependent potassium channel KCNB1 (PubMed:12954870).
	Associated with KCNC4/Kv3.4 is proposed to form the subthreshold voltage-gated potassium
	channel in skeletal muscle and to establish the resting membrane potential (RMP) in muscle
	cells. Associated with KCNQ1/KCLQT1 may form the intestinal cAMP-stimulated potassium
	channel involved in chloride secretion that produces a current with nearly instantaneous
	activation with a linear current-voltage relationship.
