Datasheet for ABIN1410700 anti-FICD antibody (AA 161-250) (Cy5)

antibodies .-online.com

Overview

Quantity:	100 µL	
Target:	FICD	
Binding Specificity:	AA 161-250	
Reactivity:	Mouse	
Host:	Rabbit	
Clonality:	Polyclonal	
Conjugate:	This FICD antibody is conjugated to Cy5	
Application:	Western Blotting (WB), Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p))	

## Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human HYPE
Isotype:	lgG
Cross-Reactivity:	Mouse
Predicted Reactivity:	Human,Rat,Dog,Sheep,Pig,Horse
Purification:	Purified by Protein A.
Target Details	
Target:	FICD
Alternative Name:	HYPE/HIP13 (FICD Products)

Target Details	
Background:	Synonyms: Adenosine monophosphate-protein transferase FICD, AMPylator FICD, FIC domain
	containing, FIC domain containing protein, FIC domain-containing protein, Fic S phase protein
	cell division homolog, ficd, FICD_HUMAN, HIP-13, HIP13, Huntingtin interacting protein 13,
	Huntingtin interacting protein E, Huntingtin interactor protein E, Huntingtin yeast partner E,
	Huntingtin-interacting protein 13, Huntingtin-interacting protein E.
	Background: Huntingtin yeast partner E is a 458 amino acid single-pass membrane protein.
	HYPE is thought to interact with Huntingtin, a protein which induces neurodegeneration when
	mutated. HYPE also contains two tetratricopeptide repeats (TPR), which may be involved in
	protein-protein interaction. The gene that encodes HYPE is located on chromosome 12, which
	encodes over 1,100 genes within 132 million bases and makes up about 4.5 % of the human
	genome. A number of skeletal deformities are linked to chromosome 12 including
	hypochondrogenesis, achondrogenesis and Kniest dysplasia. Chromosome 12 is also home to
	a homeobox gene cluster which encodes crucial transcription factors for morphogenesis, and
	the natural killer complex gene cluster encoding C-type lectin proteins which mediate the NK
	cell response to MHC I interaction. Trisomy 12p leads to facial development defects, seizure
	disorders and a host of other symptoms varying in severity depending on the extent of
	mosaicism and is most severe in cases of complete trisomy.

## Application Details

Application Notes:	IF(IHC-P) 1:50-200
	IF(IHC-F) 1:50-200
	IF(ICC) 1:50-200
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 µg/µL
Buffer:	Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and
	50 % Glycerol.
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be
	handled by trained staff only.
Storage:	-20 °C

Storage Comment:

Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles.

Expiry Date:

12 months
