CRBN functions are thought to be related to energy metabolism, learning and memory.<br/>Localized to the cytoplasm, CRBN acts as a protease in mitochondria and is thought to regulate<br/>the assembly of KCNT1, as well as the surface expression of KCNT1 in brain regions known to<br/>affect memory and learning, such as the hippocampus. The gene encoding CRBN belongs to a<br/>family of ATP-dependent lon proteases that play a role in membrane trafficking and proteolysis.<br/>Defects in the CRBN gene are associated with mild mental retardation.
