Target Details

Acid sensing ion channel 4, Acid-sensing ion channel 4, Amiloride sensitive cation channel 4, Amiloride sensitive cation channel 4 pituitary, Amiloride sensitive cation channel family member 4 pituitary, Amiloride-sensitive cation channel 4, Amiloride-sensitive cation channel 4, ASIC4, BNAC4, Brain sodium channel 4, pituitary.

Background: This gene belongs to the superfamily of acid-sensing ion channels, which are proton-gated, amiloride-sensitive sodium channels. These channels have been implicated in synaptic transmission, pain perception as well as mechanoperception. This gene is predominantly expressed in the pituitary gland, and was considered a candidate for paroxysmal dystonic choreoathetosis (PDC), a movement disorder, however, no correlation was found between mutations in this gene and PDC.
