and fibronectin type III domain containing protein 1, Leucine-rich repeat and fibronectin ty	oe III
domain-containing protein 1, LRFN 1, Irfn1, LRFN1_HUMAN, SALM 2, SALM2, Synaptic	
adhesion like molecule 2, Synaptic adhesion-like molecule 2.	
Background: LRFN1 is a 771 amino acid single-pass type I membrane protein that belongs	s to
the LRFN family. Containing a fibronectin type-III domain, an Ig-like (immunoglobulin-like)	
domain, a LRRCT domain, a LRRNT domain and seven LRR (leucine-rich) repeats, LRFN1 i	S
thought to promote neurite outgrowth in hippocampal neurons and is involved in the regul	ation
and maintenance of excitatory synapses. LRFN1 forms heteromeric complexes with LRFN	√2,
LRFN3, LFRN4 and LFRN5, but does not have the ability to form homomeric complexes a	cross
cell junctions of adjacent cells like other LRFN family members. The PDZ-binding motif of	
LRFN1 is required for neurite outgrowth promotion and for SAP 97-, NE-dlg- and PSD-95-	
binding. LRFN1 is encoded by a gene located on human chromosome 19q13.2 and mous	Ĵ
chromosome 7 A3.
