Target Details

Background:	Synonyms: IP3R-III, IP3 receptor isoform 3, 4 antibody 5-trisphosphate receptor, 5-
	trisphosphate receptor type 3, FLJ36205, Inositol 1, Inositol 1,4,5 trisphosphate receptor type 3
	IP3 receptor, IP3R 3, IP3R, IP3R3, ITPR 3, ITPR3, ITPR3_HUMAN, Type 3 inositol 1, Type 3
	inositol 1,4,5 trisphosphate receptor, Type 3 InsP3 receptor.
	Background: Inositol 1,4,5-triphosphate (IP3) functions as a second messenger for a myriad of
	extracellular stimuli including hormones, growth factors and neurotransmitters. Receptor
	tyrosine kinases indirectly increase the intracellular levels of IP3 through the activation of
	phospholipases such as phospholipase C (PLC), which convert phosphatidylinositol-4,5
	bisphosphate into IP3 and diacylglycerol (DAG). The inositol 1,4,5-triphosphate receptor, IP3R,
	acts as an inositol triphosphate (IP3)-gated calcium release channel in a variety of cell types.
	Three IP3 receptor subtypes have been described and are designated IP3R-I, IP3R-II and IP3R-
	III. IP3R-I is the predominant IP3R subtype expressed in neuronal tissues and the central
	nervous system, but is also expressed at high levels in the liver.
