Target Details

Background:	Synonyms: RDH13, RDH13_HUMAN, Retinol dehydrogenase 13 all trans and 9 cis, Retinol
	dehydrogenase 13 all trans/9 cis, Retinol dehydrogenase 13.
	Background: RDH13, also known as all-trans and 9-cis retinol dehydrogenase 13 or SDR7C3, is
	a 331 amino acid mitochondrial protein belonging to the short-chain
	dehydrogenases/reductases (SDR) family. Widely expressed, mostly in eye, pancreas, placenta
	and lung, RDH13 localizes on the outer side of the inner mitochondrial membrane. Related to
	microsomal retinoid oxidoreductase RDH11, RDH13 is considered to be a major enzyme
	among the RDH family of proteins. Catalytically active, RDH13 recognizes retinoids as
	substrates and may function in retinoic acid production. RDH13 may function to protect the
	mitochondria against oxidative stress. Leber congenital amaurosis (LCA) type 3, an inherited
	autosomal recessive retinal disease, has been associated with defects of RDH13. LCA
	represents the most common genetic cause of congenital visual impairment in infants and
	children.
