| proteins that participate in calcium-binding events within the cell. EF-hand domains generally |
|---|
| exist in a pair that, together, form a stable four-helix bundle that enables the binding of calcium |
| ions. EF-HA1 (EF-hand domain family, member A1) is a 434 amino acid protein that contains |
| four EF-hand domains, suggesting a role in calcium-mediated events throughout the cell. The |
| gene encoding EF-HA1 maps to human chromosome 13, which houses over 400 genes, such |
| as BRCA2 and RB1, and comprises nearly 4 % of the human genome. Trisomy 13, also known |
| as Patau syndrome, is deadly and the few who survive past one year suffer from permanent |
| neurologic defects, difficulty eating and vulnerability to serious respiratory infections. |
