	to the endocytic pathway. This protein contains a RING zinc-finger motif and has been shown
	to possess E3 ubiquitin ligase activity. Expression of this gene in retrovirally transduced T cell
	hybridoma significantly inhibits activation-induced IL2 and IL4 cytokine production. Induced
	expression of this gene was observed in anergic CD4(+) T cells, which suggested a role in the
	induction of anergic phenotype. Alternatively spliced transcript variants encoding distinct
	isoforms have been reported. [provided by RefSeq, Jul 2008].
