	associated ring finger C3HC4 7 E3 ubiquitin protein ligase, membrane associated ring finger
	C3HC4 7, Membrane associated RING finger protein 7, Membrane-associated RING finger
	protein 7, Membrane-associated RING-CH protein VII, RING finger protein 177, RNF177.
	Background: Axotrophin is a stem cell gene that encodes a protein which is involved in T
	lymphocyte regulation (especially in regulating the proliferation) and leukemia inhibitory factor
	(LIF) release. LIF is a neuropoietic cytokine that is important for stem cell regulation and
	thymocyte stimulation. Both Axotrophin and LIF are linked to transplantation intolerance.
	Axotrophin is also involved in corpus callosum differentiation and may play a role in glial cell
	line-derived neurotrophic factor (GDNF)-dependent sensory neuron survival in the substantia
	gelatinosa of the adult spinal cord. Axotrophin is primarily expressed in the hippocampus,
	cortex, purkinje and granule cells of the cerebellum.
