## Target Details

|           | as two isoforms produced by alternative splicing, TSPEAR contains one Thrombospondin N-       |
|-----------|---|
|           | terminal domain and seven EAR (epilepsy-associated repeat) domains. EAR domains are found     |
|           | in several proteins, including TSPEAR, encoded by genes that map within chromosome regions    |
|           | associated with seizure disorders. It is thought that the EAR domain plays a role in the      |
|           | pathogenesis of epilepsy by either binding to an unknown epileptic ligand or interfering with |
|           | axon synaptogenesis.  |
| Pathways: | Sensory Perception of Sound   |
