Datasheet for ABIN1459102 Ephrin A2 Protein (EFNA2) (AA 23-175) (His tag)

Overview

Overview	
Quantity:	1 mg
Target:	Ephrin A2 (EFNA2)
Protein Characteristics:	AA 23-175
Origin:	Chicken
Source:	Yeast
Protein Type:	Recombinant
Purification tag / Conjugate:	This Ephrin A2 protein is labelled with His tag.
Application:	ELISA
Product Details	
Sequence:	PGKVISDR YAVYWNRSNP RFHRGDYTVE VSINDYLDIY CPHYEEPLPA ERMERYVLYM
	VNYEGHASCD HRQKGFKRWE CNRPDSPSGP LKFSEKFQLF TPFSLGFEFR PGHEYYYISA
	SPLNVVDRPC LKLKVYVRPT NDSLYESPEP IFTSN
Specificity:	Gallus gallus (Chicken)
Characteristics:	Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalien
	cells or by baculovirus infection. Be aware about differences in price and lead time.
Purity:	> 90 %
Target Details	
Target:	Ephrin A2 (EFNA2)
Alternative Name:	Ephrin-A2 (EFNA2) (EFNA2 Products)

Alternative name(s): ELF-1 EPH-related receptor tyrosine kinase ligand 6. Short name= LERK-6 Application Details Comment: The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell system is systems. The yeast protein expression system serve as a eukaryotic system incept by medium and the culture conditions restrict the promotion of mammalian cell expression system serve as a eukaryotic system incept be modificated such as glycosylation, apotein expressed by yeast system could be modificated such as glycosylation, apotein expression and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies. Restrictions: For Research Use only Handling Upphilized Concentration: 0.2-2 mg/mL. Ruffer: Tris-based buffer, 50 % glycerol Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 *C for up to on week	Target Details	
Application Details Comment: The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expressed by the mammalian cell system of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression system. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies. Restrictions: For Research Use only Handling Upphilized Concentration: 0.2-2 mg/mL Suffer: Tris-based buffer, 50 % glycerol Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 "C for up to one week	Background:	Alternative name(s): ELF-1 EPH-related receptor tyrosine kinase ligand 6.
Comment: The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expressed by the mammalian cell system in of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies. Restrictions: For Research Use only Handling 0.2-2 mg/mL Ruffer: Tris-based buffer, 50 % glycerol tandling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week	UniProt:	P52802
for secretion and intracellular expression. A protein expressed by the mammalian cell system i of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies. Handling format: Lyophilized Concentration: 0.2-2 mg/mL Buffer: Tris-based buffer, 50 % glycerol Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week	Application Details	
Format: Lyophilized Concentration: 0.2-2 mg/mL Buffer: Tris-based buffer, 50 % glycerol Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week	Comment: Restrictions:	for secretion and intracellular expression. A protein expressed by the mammalian cell system is of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies.
Format: Lyophilized Concentration: 0.2-2 mg/mL Buffer: Tris-based buffer, 50 % glycerol Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week	Handling	
Buffer: Tris-based buffer, 50 % glycerol Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week	Format:	Lyophilized
Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week	Concentration:	0.2-2 mg/mL
one week	Buffer:	Tris-based buffer, 50 % glycerol
Storage: -20 °C	Handling Advice:	
	Storage:	-20 °C

Storage Comment: Store at -20 °C, for extended storage, conserve at -20 °C or -80 °C.
