Target Details

| Target: | SDHB |
|-------------------|---|
| Alternative Name: | Succinate dehydrogenase [ubiquinone] iron-sulfur subunit, mitochondrial (Sdhb) (SDHB Products) |
| Background: | Recommended name: Succinate dehydrogenase [ubiquinone] iron-sulfur subunit, mitochondrial. EC= 1.3.5.1. Alternative name(s): Iron-sulfur subunit of complex II. Short name= Ip |
| UniProt: | P21913 |

Application Details

| Comment: | The yeast protein expression system is the most economical and efficient eukaryotic system |
|----------|--|
| | for secretion and intracellular expression. A protein expressed by the mammalian cell system is |
| | of very high-quality and close to the natural protein. But the low expression level, the high cost |
| | of medium and the culture conditions restrict the promotion of mammalian cell expression |
| | systems. The yeast protein expression system serve as a eukaryotic system integrate the |
| | advantages of the mammalian cell expression system. A protein expressed by yeast system |
| | could be modificated such as glycosylation, acylation, phosphorylation and so on to ensure the |
| | native protein conformation. It can be used to produce protein material with high added value |
| | that is very close to the natural protein. Our proteins produced by yeast expression system has |
| | been used as raw materials for downstream preparation of monoclonal antibodies. |
