family of G-protein-coupled receptors (GPCR) arising from single coding-exon gene	s. Olfactory
receptors share a 7-transmembrane domain structure with many neurotransmitter	and
hormone receptors and are responsible for the recognition and G protein-mediated	
transduction of odorant signals. The olfactory receptor gene family is the largest in	the
genome. The nomenclature assigned to the olfactory receptor genes and proteins	or this
organism is independent of other organisms.
