Target Details

| that triggers the perception of a smell. The olfactory receptor proteins are members of a large |
|---|
| family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory |
| receptors share a 7-transmembrane domain structure with many neurotransmitter and |
| hormone receptors and are responsible for the recognition and G protein-mediated |
| transduction of odorant signals. The olfactory receptor gene family is the largest in the |
| genome. The nomenclature assigned to the olfactory receptor genes and proteins for this |
| organism is independent of other organisms. |
