|                   | organization similar to that of B-cell and T-cell receptor gene clusters. The alpha gene cluster is    |
|                   | composed of 15 cadherin superfamily genes related to the mouse CNR genes and consists of               |
|                   | 13 highly similar and 2 more distantly related coding sequences. The tandem array of 15 N-             |

|                   | exons, which are shared by all genes in the cluster. The large, uninterrupted N-terminal exons         |
|                   | each encode six cadherin ectodomains while the C-terminal exons encode the cytoplasmic                 |
