Target Details	
Target:	RBM23
Alternative Name:	RBM23 (RBM23 Products)

This gene encodes a member of the U2AF-like family of RNA binding proteins. This protein

Target Details

interacts with some steroid nuclear receptors, localizes to the promoter of a steroid-responsive
gene, and increases transcription of steroid-responsive transcriptional reporters in a hormone-
dependent manner. It is also implicated in the steroid receptor-dependent regulation of
alternative splicing. Multiple transcript variants encoding different isoforms have been found for
this gene.
