Target Details

Target:	ZNF346
Alternative Name:	ZNF346 (ZNF346 Products)
Background:	The protein encoded by this gene is a nucleolar, zinc finger protein that preferentially binds to

Target Details

double-stranded (ds) RNA or RNA/DNA hybrids, rather than DNA alone. Mutational studies indicate that the zinc finger domains are not only essential for dsRNA binding, but are also required for its nucleolar localization. The encoded protein may be involved in cell growth and survival.
