Datasheet for ABIN1568117 Acetylcholine ELISA Kit

Overview

| Quantity: | 96 tests |
|-----------------------------|---|
| Target: | Acetylcholine (ACH) |
| Reactivity: | Various Species |
| Method Type: | Competition ELISA |
| Detection Range: | 15.6 pg/mL - 1000 pg/mL |
| Minimum Detection Limit: | 15.6 pg/mL |
| Application: | ELISA |
| Product Details | |
| Purpose: | The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of ACH in serum, plasma, tissue homogenates and other biological fluids. |
| Sample Type: | Plasma, Serum, Tissue Homogenate |
| Analytical Method: | Quantitative |
| Detection Method: | Colorimetric |
| Specificity: | This assay has high sensitivity and excellent specificity for detection of this index. |
| Cross-Reactivity (Details): | No significant cross-reactivity or interference between this index and analogues was observed. Note: Limited by current skills and knowledge, it is impossible for us to complete the cross- reactivity detection between this index and all the analogues, therefore, cross reaction may still exist. |

Sensitivity:

6.8 pg/mL

Product Details

| Components: | Pre-coated, ready to use 96-well strip plate Standard (freeze dried) Standard Diluent Detection Reagent A Detection Reagent B Assay Diluent A Assay Diluent B TMB Stop Solution Wash Buffer (30X) Plate sealer for 96 wells Instruction manual |
|------------------------|---|
| Material not included: | Microplate reader with 450 ± 10nm filter. Precision single or multi-channel pipettes and disposable tips. Eppendorf Tubes for diluting samples. Deionized or distilled water. Absorbent paper for blotting the microtiter plate. Container for Wash Solution. |

Target Details

| Target: | Acetylcholine (ACH) |
|--------------|---------------------|
| Abstract: | ACH Products |
| Target Type: | Chemical |

Application Details

| Sample Volume: | 50 µL |
|----------------|--|
| Assay Time: | 1 - 4.5 h |
| Plate: | Pre-coated |
| Protocol: | 1. Prepare all reagents, samples and standards |
| | 2. Add 50µL standard or sample to each well. |
| | And then add 50µL prepared Detection Reagent A immediately. |
| | Shake and mix. Incubate 1 hour at 37°C |
| | 3. Aspirate and wash 3 times |
| | 4. Add 100 μ L prepared Detection Reagent B. Incubate 1 hour at 37°C |
| | 5. Aspirate and wash 5 times |

| | 6. Add 90µL Substrate Solution. Incubate 15-25 minutes at 37°C |
|--|---|
| | 7. Add 50µL Stop Solution. Read at 450 nm immediately. |
| Assay Procedure: | This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal |
| | antibody specific to the index has been pre-coated onto a microplate. A competitive inhibition |
| | reaction is launched between biotin labeled the index and unlabeled the index (Standards or |
| | samples) with the pre-coated antibody specific to the index. After incubation the unbound |
| | conjugate is washed off. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to |
| | each microplate well and incubated. The amount of bound HRP conjugate is reverse |
| | proportional to the concentration of the index in the sample. After addition of the substrate |
| | solution, the intensity of color developed is reverse proportional to the concentration of the |
| | index in the sample. |
| Assay Precision: | • Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level the index were tested 20 times on one plate, respectively. |
| | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level the index were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 |
| | Intra-assay: CV<10% |
| | Inter-assay: CV&It12% |
| | |
| Restrictions: | For Research Use only |
| Restrictions: Handling | |
| | |
| Handling | For Research Use only The Stop Solution suggested for use with this kit is an acid solution. Wear eye, hand, face, and |
